MODULE TEST (MT - 01)

Batch : 12TH Pass (Desire - A01 & A02)

Date 15.09.2019

PART - 1 [PHYSICS]

1. Sol. (C)

$$\text{Rate of change of spring energy} = \frac{d}{dt} \left(\frac{kx^2}{2} \right) = \frac{2kx}{2} \frac{dx}{dt} = kx \frac{dx}{dt} = (200) \left(\frac{1}{10} \right) (4 + 6) = 200 \text{ J/s}$$

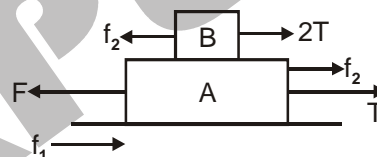

2. Sol. (D)

f_1 and f_2 are maximum static frictions.

$$2T = f_2 = 10\text{N}$$

$$T = 5\text{N}$$

$$F = f_1 + f_2 + T$$

3. Sol. (C)

$$ma + mg - T = ma$$

$$\Rightarrow T = mg$$

4. Sol. (A)

Let d be distance between walls and u be horizontal component of velocity.

Time from A to E

$$t_1 = d/u$$

t_2 (From E to F)

$$t_2 = \frac{d}{eu}$$

t_3 (From F to D)

$$t_3 = \frac{d}{e^2u}$$

t_4 (From D to A)

$$t_4 = \frac{d}{e^3u}$$

$$t_4 = t_1 + t_2 + t_3$$

$$\Rightarrow e^3 + e + e = 1$$

Since the vertical component of velocity during impact remain unchanged.

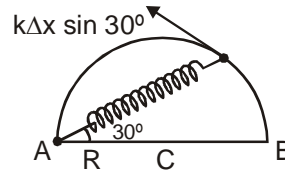

5. **Sol. (D)**

$$\Delta x = \sqrt{3}R - \frac{R}{\sqrt{3}} = \frac{2R}{\sqrt{3}}$$

$$k\Delta x \sin 30^\circ = ma$$

$$\frac{k2R}{\sqrt{3}} \times \frac{1}{2} = ma$$

$$a = \frac{kR}{\sqrt{3}m}$$

6. **Sol. (A)** $10\text{hr} = \frac{500}{v \cos 53^\circ}$

$$v \sin 53^\circ = V_w$$

7. **Sol. (C)**

$$\text{Net momentum (at } t = 3t_0) = (3m) g (3t_0) \hat{j}$$

$$m(V_1 \hat{i} + V_2 \hat{j}) + 2m(x \hat{i} + y \hat{j}) = (9mgt_0) \hat{j}$$

$$x \hat{i} + y \hat{j} = \text{Velocity of heavier block at } t = 3t_0$$

$$x = -\frac{V_1}{2}$$

$$y = \frac{9gt_0 - V_2}{2}$$

$$x \hat{i} + y \hat{j} = \left(-\frac{V_1}{2}\right) \hat{i} + \left(\frac{9}{2}gt_0 - \frac{V_2}{2}\right) \hat{j}$$

$$\text{Velocity at } t = t_0 = -\frac{V_1}{2} \hat{i} + \left(\frac{9}{2}gt_0 - \frac{V_2}{2}\right) \hat{j} - (2gt_0) \hat{j}$$

8. **Sol. (A)**

F.B.D of M

Tension on the ring is horizontal vertical Mg is balanced by friction.

$N = T$ and μmg downward.

MULTI CORRECT

9. Sol. (BCD)

$$(B) T = mg$$

$$N = T + 4mg = 5mg$$

(C) Constraint

(D) Block A obtains acceleration a rightwards

$$N \text{ (on B by A)} = ma$$

10. Sol. (ABCD)

$$\vec{v}_A = 4\hat{i} + 4\hat{k} \quad \vec{a}_A = -g\hat{k}$$

$$\vec{v}_B = 3\hat{j} + 4\hat{k} \quad \vec{a}_B = -g\hat{k}$$

$$\vec{v}_A - \vec{v}_B = 4\hat{i} - 3\hat{j} \quad \vec{a}_{AB} = 0$$

$$|\vec{v}_{AB}| = 5 \text{ m/s}$$

$$\text{Time of flight } t_A = \frac{2 \times 4}{g} = \frac{8}{g}, \quad t_B = \frac{2 \times 4}{g} = \frac{8}{g}$$

$$\text{Separation when they hit the ground} = 5 \times \frac{8}{g} = 4 \text{ m}$$

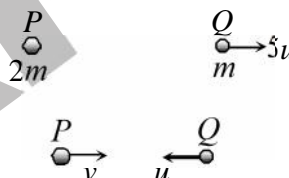

11. Sol. (BD)

$$5mu = 2mv - mu$$

$$v = 3u$$

$$\frac{1}{2}m(5u)^2 + W = \frac{1}{2}mu^2 + \frac{1}{2} \times 2m(3u)^2$$

$$W = -3mu^2$$

12. Sol. (AD)

$$\text{Initial speed of COM} = \frac{m_1 v_1 + m_2 v_2}{m_1 + m_2} = \frac{v_0}{2}$$

$$\text{Acceleration of COM} = \frac{\text{Net force}}{\text{Total mass}} = g \downarrow$$

In COM frame, pseudo force on both particles = $mg \uparrow$
pseudo cancels gravity force.

$$\text{Constant velocity of both particles in COM frame} = \frac{v_0}{2} \text{ (up \& down)}$$

$$\text{KE when COM stops or at highest point} = 2 \left(\frac{1}{2} m \frac{v_0^2}{4} \right)$$

Integer Type

13. Sol. (0004)

$$\begin{array}{ll} m_0 \downarrow v_0 & m_0 \downarrow v_0 \\ 3m_0 \downarrow v_0 & 3m_0 \uparrow v_0 \end{array}$$

Velocity of $3m_0$ is inverted to $3v_0$ upwards after it hits the ground. Now find the velocity of m .

$$v_1 = \left(\frac{m_1 - m_2}{m_1 + m_2} \right) u_1 + \left(\frac{2m_2}{m_1 + m_2} \right) u_2 = \left(\frac{-2m_0}{4m_0} \right) (-v_0) + \left(\frac{6m_0}{4m_0} \right) v_0 = \frac{v_0}{2} + \frac{3}{2} v_0 = 2v_0$$

$$h' = 4h$$

14. Sol. (0007)

15. Sol. (0004)

Spring force in spring 2 before cutting = $2mg$

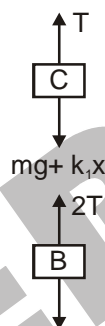

Spring force in spring 1 before cutting = mg

just after cutting the string spring forces do not change.

$$\text{For A: } k_2 x - 2mg = 2ma_A \Rightarrow a_A = 0$$

$$\text{For B: } k_2 x + 2mg = 4mg = 2ma_B \Rightarrow a_B = 2g$$

$$\text{For C: } k_1 x + mg = 2mg = ma_C \Rightarrow a_C = 2g$$

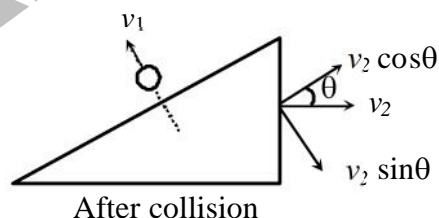

16. Sol. (0003)

$$\theta = \sin \theta = \tan \theta = \frac{1}{200}$$

$$\text{Power } P = (mg \sin \theta + \text{Total track resistance}) v$$

17. Sol. (0002) Equation of Newton's collision law

$$\frac{v_1 + v_2 \sin \theta}{v_0}, \quad e = \frac{v_1 + \frac{v_2}{2}}{v_0}$$

$$2v_1 + v_2 = 7 \quad \dots (i)$$

From momentum conservation (in horizontal direction)

$$mv \sin 30 = -mv_1 \sin 30 + mv_2$$

$$5 = \frac{v_1}{2} + 2v_2 \quad \dots (ii)$$

$$\text{Solving } v_1 = 2 \text{ m/s}$$

18. Sol. (0005)

$$\text{Normal reaction between wedge and block} = \frac{mg}{\sqrt{2}},$$

$$\text{Normal reaction between wedge and ground} = \left(\frac{mg}{\sqrt{2}} \right) \frac{1}{\sqrt{2}} + 2mg = \frac{5mg}{2}; \quad \mu \left(\frac{5mg}{2} \right) = \left(\frac{mg}{\sqrt{2}} \right) \frac{1}{\sqrt{2}}$$
