SOLUTIONS

Module Test - [MT - 01]

JEE ADV. Paper - 02

Batch : 12th (Zenith- 1820 - X01 & X02)

PHYSICS

SECTION-1

1. Sol. (A, B, C)

$$\text{Pitch} = \frac{2\pi m}{qB} V_0 \cos \theta$$

2. Sol. (B, D)

Resistance absorbs energy at the rate of 2W.

Potential difference across AB $\Rightarrow V_{AB} \cdot I = 50 \text{ W}$

$$V_{AB} = 50 \text{ V}$$

Drop across resistor is 2V, therefore EMF of E is 48 V.

As AB is absorbing energy at the rate of 50 W, 48 W is being absorbed by E. Thus, E is charging. i.e., current is entering from + ve terminal of E.

3. Sol. (A,B,C,D)

The total charge on inner surface of conductor will be zero & charge on outer surface is Q (uniform).

4. Sol. (A,B,D)

$$\frac{-\sigma}{2\epsilon_0} = \frac{x}{2\epsilon_0} - \frac{3\sigma}{2\epsilon_0} \Rightarrow x = 2\sigma$$

At $x = -2$

$$E = \frac{2\sigma}{2\epsilon_0} \hat{i} = \frac{\sigma}{\epsilon_0} \hat{i}$$

At $x = 3$

$$E = \frac{-\sigma}{2\epsilon_0} + \frac{2\sigma}{2\epsilon_0} + \frac{3\sigma}{2\epsilon_0} = \frac{4\sigma}{2\epsilon_0} = \frac{2\sigma}{\epsilon_0} \hat{i}$$

At $x = 6$

$$E = \frac{-\sigma}{\epsilon_0} \hat{i}$$

5. **Sol. (A,B,D)** Potential gradient on the wire = $\frac{2V}{L}$. S_1 closed \rightarrow only R is there in lower circuit. PD across it is $\frac{V}{3}$.
When only S_2 closed, PD across $(R + 2R)$ is V.
6. **(B, D)**
7. **(A, C)**
8. **(A, D)**

SECTION - 2

9. **Sol. (3)**
Point A shall record zero magnetic field (due to α -particle) when the α -particle is at position P and Q as shown in figure. The time taken by α -particle to go from P to Q is

$$t = \frac{1}{3} \frac{2\pi}{\omega} \quad \text{or} \quad \omega = \frac{2\pi}{3t} \Rightarrow \omega = 3 \text{ rad/sec}$$

10. **Sol. (9)**
 $dV = -E dx = -\vec{E} \cdot d\vec{r} = -(y^2 \hat{i} + 2yx \hat{j}) \cdot (dx \hat{i} + dy \hat{j}) = -(y^2 dx + 2yxdy) = -d(xy^2) = -[-9 - (0)] = 9 \text{ volt.}$
11. **Sol. (5)**
For ammeter
 $99 I_g = (I - I_g) 1$
or $I = 100 I_g$
 I_g is the full scale deflection current of the galvanometer and I is the range of ammeter
For the circuit in the adjacent figure,

$$\frac{12 \text{ V}}{2 + r + \frac{99 \times 1}{99 + 1}} = 3 \text{ A}$$

$$\Rightarrow r = 1.01 \, \Omega$$

For voltmeter, range

$$V = I_g(99 + 101) = 200 I_g$$

Also resistance of the voltmeter = $99 + 101 = 200 \, \Omega$

...(1)

In the adjacent figure, resistance across the terminals of the battery

$$R_1 = r + \frac{200 \times 2}{202} = 2.99 \, \Omega$$

$$\therefore \text{Current drawn from the battery, } I_1 = \frac{12}{2.99} = 4.01 \, \text{A}$$

\therefore Voltmeter reading

$$\frac{4}{5} V = 12 - I_1 r = 12 - 4.01 \times 1.01$$

$$V = 7.96 \times \frac{5}{4} = 9.95 \, \text{V}$$

$$\text{Using eq. (2), } I_g = \frac{9.95}{200} = 0.05 \, \text{A}$$

Using eq. (1), range of the ammeter

$$I = 100 I_g = 5 \, \text{A}$$

12. **Sol. (4)**

$$\text{Field} = \frac{\mu_0 i}{4\pi a} \times 2 + \frac{\mu_0 i}{2a} \left(\frac{\pi}{2 \times 2\pi} \right) = \frac{\mu_0 i}{2\pi a} + \frac{\mu_0 i}{8\pi a} \pi = \frac{\mu_0 i}{8\pi a} (4 + \pi)$$

13. **Sol. (5)**

Before closing switch,

$$\text{Initial energy } U = \left(\frac{1}{2} \times 5 \times 5^2 \right) \times 2 + \left(\frac{1}{2} \times 5 \times 10^2 \right) = 125 + 250 = 375 \, \mu\text{J}$$

After closing switch,

$$U_f = \frac{1}{2} \times 5 \times 10^2 + \frac{1}{2} \times 5 \times 10^2 = 500 \mu\text{J}$$

$$\text{Heat} = W_b - \Delta U = (25)(10) - (500 - 375) = 125 \mu\text{J}$$

14. Ans. 4

SECTION - 3

15. Ans. (A \rightarrow s), (B \rightarrow q), (C \rightarrow q), (D \rightarrow q)

16. Ans. A \rightarrow s; B \rightarrow q; C \rightarrow r; D \rightarrow p, s

17. Ans. A \rightarrow p, r, s, t; B \rightarrow p, r; C \rightarrow p, r, s, t; D \rightarrow q

18. Ans. A \rightarrow p, s; B \rightarrow q, r, s; C \rightarrow q, r, s; D \rightarrow p
